List of available searches

[\[CustomSearchList\]](#)

As explained in its [main introduction](#), the Nematrian Extensions part of the Nematrian website contains a wide range of material to help you understand the latest developments in quantitative finance and actuarial and mathematical thinking.

One practical challenge that researchers face is the sheer volume of material now available through the Internet and the difficulty of sifting the many pages of links that can be returned by all but the most well-crafted internet searches. To help address this challenge, Nematrian has created a range of search tools that target selected pre-defined sets of associated websites. Links to the tools are listed in the first column of the table below. In the second column are links to pages indicating exactly which websites are targeted by the relevant tool.

Please [contact us](#) if you believe that any of these links are no longer work or need updating.
